## Computer Driven, Modular Designed General Aviation Flight Simulators

On the threshold of this new millennium, Aviation Simulation Technology, Inc. proudly enters its third decade as an internationally recognized leader in the manufacture of flight simulators (FTD) for General Aviation.

Today, Aviation Simulation Technology continues its commitment to General Aviation in developing reliable simulators offering the broadest range of flight training assuring the greatest positive "in flight" transfer of skill.

A new generation of flight training simulators (FTD) especially developed for single, multi-engine and turbine powered aircraft, is now available, the AST Phoenix Series.

The unparalleled Phoenix Series combines advanced digital and microprocessing technology with the innovative design and experience of Aviation Simulation Technology to replicate accurate flight models, aircraft performance and pilot response. The versatile Phoenix Series is computer driven, modular in construction and features enhanced "real world" color visuals.

Aviation Simulation Technology, offers complete engineering, manufacturing, sales, financing, training, and comprehensive diagnostic services at their newly constructed state-of-the-art facilities located in Burlington, Kansas, on the Coffey County Airport.
